

"I have concerns about my child's development."

"My 2 year old prefers to play alone and doesn't pretend with his toys."

"Our grandson insists on doing things the same way every time and gets upset by even the smallest change."

"I have a student who doesn't talk like other kids. He seems very behind."

"My daughter refuses to eat anything but a few specific foods. I'm worried she's not getting the nutrition she needs."

"My child was recently diagnosed with a developmental delay - what do I do now to help him?"

Not all kids learn the same. If your child's development and learning are delayed, ABA can help!

ABA stands for Applied Behavior Analysis and it is a research proven method that reduces interfering behaviors in individuals of all ages and teaches functional replacement skills. Autism Connections utilizes the principles of ABA to create parent experts and to help children of all abilities interact with and enjoy the world around them.
